The solutions in the nonprofit accelerator leverage Common Data Model for Nonprofits and can be leveraged to build solutions on the Microsoft Power Platform and/or Microsoft Dynamics 365. Depending on the partner and organization needs, the nonprofit accelerator can be implemented in multiple ways with dependencies to consider with each solution.

### Dynamics 365 nonprofit accelerator - Common Data Model ...

Big data analytics is the use of advanced analytic techniques against very large, diverse big data sets that include structured, semi-structured and

unstructured data, from different sources, and in different sizes from terabytes to zettabytes.

### **Big Data Analytics | IBM**

Data modeling (data modelling) is the process of creating a data model for the data to be stored in a database. This data model is a conceptual representation of Data objects, the associations between different data objects, and the rules. Data modeling helps in the visual representation of data and enforces business rules, regulatory compliances, and government policies on the data.

### **Data Modelling: Conceptual, Logical, Physical Data Model Types**

A data model provides the details of information to be stored, and is of primary use when the final product is the generation of computer software code for an application or the preparation of a functional specification to aid a computer software make-or-buy decision. The figure is an example of the interaction between process and data models.

### **Data model - Wikipedia**

The term polyglot persistence is used to describe solutions that use a mix of data store technologies. Therefore, it's important to understand the main storage models and their tradeoffs. Selecting the right data store for your requirements is a key design decision.

Build and deploy end-to-end decision-support applications using a GUI, collaboration tools, "what-if" analysis, application data model support and flexible deployment architecture options. Build and deploy complete optimization solutions

### **Decision Optimization | IBM**

Data-driven decision making (or DDDM) is the process of making organizational decisions based on actual data rather than intuition or observation alone. Every industry today aims to be data-driven. No company, group, or organization says, "Let's not use the data; our intuition alone will lead to solid decisions."

### **Data-Driven Decision Making: A Primer for Beginners**

This course is designed to introduce first-year Sloan MBA students to the fundamental techniques of using data. In particular, the course focuses on various ways of modeling, or thinking structurally about decision problems in order to make informed management decisions.

### **Data, Models, and Decisions | Sloan School of Management ...**

Even classical machine learning and statistical techniques such as clustering, density estimation, or tests of hypotheses, have model-free, data-driven, robust versions designed for automated processing (as in machine-to-machine communications), and thus also belong to deep data science.

### **40 Techniques Used by Data Scientists - Data Science Central**

Data modeling is the act of exploring data-oriented structures. Like other modeling artifacts data models can be used for a variety of purposes, from high-level conceptual models to physical data models. From the point of view of an object-oriented developer data modeling is conceptually similar to class modeling.
