The file is also automatically copied onto the user's computer once synchronized with the iPhone. An open-source application named "iPhoneTracker", which turns the data stored in the file into a visual map, was made available to the public in April 2011. While the file cannot be erased without jailbreaking the phone, it can be encrypted.

A mobile operating system is an operating system for mobile phones, tablets, smartwatches, 2-in-1 PCs, smart speakers, or other mobile devices. While computers such as typical laptops are 'mobile', the operating systems used on them are generally not considered mobile ones, as they were originally designed for desktop computers that historically did not have or need specific mobile features.

The iconography of military saints Theodore, George and Demetrius as horsemen is a direct continuation of the Roman-era "Thracian horseman" type iconography. The iconography of the dragon appears to grow out of the serpent entwining the "tree of life" on one hand, and with the draco standard used by late Roman cavalry on the other. Horsemen spearing serpents and boars are widely represented in ...

In a three-dimensional coordinate system, these points are usually defined by X, Y, and Z coordinates, and often are intended to represent the external surface of an object. LiDAR scanners and Drones gather point measurements from real-world objects or photos for a point cloud that can then be translated to a 3D mesh or CAD model.

This document describes the concept of a StorageClass in Kubernetes. Familiarity with volumes and persistent volumes is suggested. Introduction A StorageClass provides a way for administrators to describe the "classes" of storage they offer. Different classes might map to quality-of-service levels, or to backup policies, or to arbitrary policies determined by the cluster administrators.
