Presentation of Jaundice Pathophysiology of jaundice. Presentation of Jaundice. Pathophysiology of jaundice. Pre -hepatic o Increased breakdown of red cells leads to increased serum bilirubin. This unconjugated bilirubin isn't water-soluble so can't be excreted in the urine. Intestinal bacteria convert some of the extra bilirubin into urobilinogen, some of which is re-absorbed and IS excreted by the kidneys - hence urinary urobilinogen is increased. Hepatic o Disorders of uptake, ...

Pathophysiology Jaundice results from high levels of bilirubin in the blood. Bilirubin is the normal breakdown product from the catabolism of haem, and thus is formed from the destruction of red blood cells. Under normal circumstances, bilirubin undergoes conjugation within the liver, making it water-soluble.
