Pulsation Systems Cow Time

The default pulsation ratio is oftentimes split between 60 percent open time and 40 percent close time. Ratios can also be split, giving different ratios to front quarters and rear quarters. However, it is always important to consult with the manufacturer, as recommendations for pulsation rates and ratios can vary based on the type of equipment and liner being used.

Does your pulsation system need a check-up? - Progressive ...

Pulsation rate is the number of times the pulsator goes through a full open and close cycle per minute, measured in pulses per minute (ppm). Pulsation ratio is the percentage of time the pulsator is in the milking (open) phase compared to the resting (closed) phase. Pulsators are set optimally within the following ranges: Rate 50 to 60 ppm
