The browsing interface has a lot of room to improve, but it's simple enough to use. Downloads are available in dozens of formats, including EPUB, MOBI, and PDF, and each story has a Flesch-Kincaid score to show how easy or difficult it is to read.

Sed Awk

The awk syntax is of the following form: awk [options] script file. It will execute the script against every line in the file. Let's now expand the structure of the script: '(pattern){action}' The pattern is a regex pattern that will be tested against every input line. If a line matches the pattern, awk will then execute the script defined in action on that line.

grep, awk and sed – three VERY useful command-line utilities
Matt Probert, Uni of York
grep = global regular expression print
In the simplest terms, grep (global regular expression print) will search input files for a search string, and print the lines that match it.

grep, awk and sed - three VERY useful command-line utilities

Awk is a scripting language used for manipulating data and generating reports. The awk command programming language requires no compiling, and allows the user to use variables, numeric functions, string functions, and logical operators.

AWK command in Unix/Linux with examples - GeeksforGeeks

Basic Syntax. The awk command is included by default in all modern Linux systems, so you do not need to install it to begin using it.. awk is most useful when handling text files that are formatted in a predictable way. For instance, it is excellent at parsing and manipulating tabular data. It operates on a line-by-line basis and iterates through the entire file.

How To Use the AWK language to Manipulate Text in Linux ...

How do I delete regex-based word using sed or awk under Linux / Unix like operating systems? You can use any standard Unix text editing and processing utility to find and replace/delete words

from the file. Sed example. The syntax is: `sed 's/<word>//g'`
input `sed-e 's/<regex-for-word>//g'` input > output.

Linux / Unix sed: Delete Word From File / Input - nixCraft

Sed is a stream editor. A stream editor is used to perform basic text transformations on an input stream (a file or input from a pipeline). While in some ways similar to an editor which permits scripted edits (such as ed), sed works by making only one pass over the input(s), and is consequently more efficient. But it is sed's ability to filter text in a pipeline which particularly distinguishes ...

Use shell script (e.g., awk, sed, Makefile, Perl) to interact with SAC Seismological research has changed significantly in the past few decades, partially due to the digital revolution. In most case, we will not be able to publish a paper based on only one or two seismograms (I was told that people in the early 1950-1960s can do that).

SAC Tutorial by Zhigang Peng

SlowText | sed -n '/1/p' | awk '{print \$1*\$1}' This works, but because sed is buffering the results, we have to wait until the buffer fills up, or until the SlowText program exists, before we see the results. You can eliminate the buffering, and see the results as soon as SlowText outputs them, by using the "-u" option.
