"Successful data visualization requires employing the right design principles to curate a meaningful story." 1. Know What You Want to Say. Mixed messages on the same dashboard leave your audience confused. Don't make people 'interpret' your message. Deliver ONE strong message by focusing the data you present to ensure a central theme emerges.

Contemporary color coding for data visualization is enabled by four technologies: statistics, color technology, displays and computing. Visualization of data was proceduralized by statisticians John Tukey and Edward Tufte in their respective landmark books *Exploratory Data Analysis* in 1977 and *Visual Display of Quantitative Information* in 1982. They did not emphasize the use of color.
